

Easy Method For Marking Xeristone® Pavers To Be Cut

Trace the shape of the stone to be cut onto a piece of cardboard.

Carefully cut out the shape of the stone to make a cardboard template.

Place the folded pattern on the stone and use as a template to mark the cut line.

Cuts can be made with a circular saw utilizing a masonry blade. Cautionary measures should be taken as recommended by the blade & saw manufacturers.

Place the template into the hole, folding to leave a 1/2" gap between the cardboard and the obstruction.

Place the cut stone into position.
